4. **The Outcome:** The system generates a random multiplier.
    - *Win Condition:* Generated Multiplier £ \ ge £ Target Multiplier.

- *Loss Condition:* Generated Multiplier £ < <£ Target Multiplier.

Comprehending Multipliers, Win Probabilities, and House Edge

In Limbo, gamers have total control over their danger and benefit ratio. Selecting a lower multiplier increases the probability of winning, while picking a higher multiplier reduces it.

To comprehend the mathematical relationship, consider the standard formula for win probability in a basic Limbo game (assuming a 1% home edge):

£ £ \ text Win Probability (%) = \ frac 100 - \ text Home Edge (%) \ text Target Multiplier £ £

Example Multiplier vs. Probability Breakdown

Target Multiplier Theoretical Win Probability (1% House Edge) Payout on a £ 10 Bet **1.01 x** 99.00% £ 10.10 **1.50 x** 66.00% £ 15.00 **2.00 x** 50.00% £ 20.00 **5.00 x** 20.00% £ 50.00 **10.00 x** 10.00% £ 100.00 **50.00 x** 2.00% £ 500.00 **100.00 x** 1.00% £ 1,000.00 **1,000.00 x** 0.10% £ 10,000.00

As revealed in the table, setting the target to 2.00 x gives the player a 50% possibility of winning (minus your house edge), doubling the stake upon success. Conversely, going for 1,000 x decreases the success rate to just 0.1%.
