What is a Towers Slot?

At its core, a Towers slot is a hybrid between standard slots mechanics and "crash" or "arcade-style" gambling. Rather of matching symbols across paylines on a 5x3 grid, gamers normally face a vertical structure made up of several rows (floors) and columns (options).

The goal is easy: start at the bottom of the tower and successfully browse your way to the top. On each flooring, the player should pick among several blocks, tiles, or doors.

- **Success:** Finding a safe course exposes a coin multiplier, enabling the player to either collect their profits or advance to the next floor.
- **Failure:** Hitting a trap, beast, or "game over" symbol ends the round immediately, surrendering the accumulated payouts for that run.

This structure introduces the classic economic problem of **risk versus benefit**. Do you squander early with a modest earnings, or do you press your luck for the legendary prize waiting at the penthouse?
