With every successful action upward, the gamer's multiplier boosts. However, a single mistake leads to striking a trap, causing the tower to collapse and the gamer to lose their stake for that round. Players can choose to cash out their jackpots at the end of any effective row, adding a continuous psychological predicament: *take the surefire profit now, or risk everything for a higher multiplier?*

Core Mechanics: How the Game Works

Before starting a round, players normally select a trouble level, which alters the measurements of the grid and the risk-to-reward ratio. Common setups consist of:

- **Easy Mode:** Usually includes a 3-tile or 4-tile wide grid with only one trap per row. The course is safer, but multipliers grow gradually.
- **Medium Mode:** Often a 3-tile large grid with 2 traps per row, or a 4-tile grid with multiple traps. This offers a well balanced threat profile.
- **Difficult/ Expert Mode:** Features narrow paths with a high concentration of traps. While very harmful, reaching the leading yields astronomical multipliers.

2. Multiplier Progression

As the player rises row by row, the mathematical multiplier substances. The specific development depends upon the picked difficulty and the overall variety of rows (normally ranging from 8 to 10 rows per tower).

Row Level Easy Mode Multiplier (Approx.) Tough Mode Multiplier (Approx.) **Row 1** 1.15 x 1.50 x **Row 3** 1.52 x 3.37 x **Row 5** 2.01 x 7.59 x **Row 7** 2.65 x 17.0 x **Top Row** 4.60 x 85.0 x+

Note: Exact multipliers vary depending upon the particular platform provider and house edge configuration.
