Players put a stake and browse a grid filled with surprise tiles. Behind these tiles lie either multipliers (gems, coins, or gold) or mines.

The objective is simple: expose as numerous multipliers as possible without clicking a mine. Each effective click increases the player's possible payout, while hitting a mine lead to the loss of the existing stake. The core appeal of the game lies in the "money out" mechanic, which permits gamers to protect their payouts at any minute before proceeding to the next tile.

How the Game Mechanics Work

The game counts on a Provably Fair algorithm, ensuring that the placement of mines is randomized and verifiable. When a round begins, the server produces a grid-- usually 5x5-- and distributes an established number of mines throughout it. The gamer then connects with the grid in the following sequence:

1. **Setting the Parameters:** Before the very first click, the gamer picks their bet amount and the number of mines they want to consist of in the grid (e.g., 1 to 24 mines in a 25-tile grid).
2. **The Reveal:** The gamer clicks a tile. If it is a multiplier, the balance increases, and the player can select to "Cash Out" or continue.
3. **The Risk:** If a mine is set off, the round ends instantly, and the stake is forfeited.
4. **The Multiplier Growth:** The more mines selected at the start, the higher the multiplier for each successful tile opened.

Comprehending Risk vs. Reward

The table listed below highlights how different mine counts impact the potential growth of a player's preliminary stake.

Variety of Mines	Multiplier (Tile 1)	Multiplier (Tile 5)	Multiplier (Tile 10)
