### What is Online Limbo?

Limbo is a busy, multiplier-based casino game. Originating in the crypto-casino sector, it is heavily influenced by classic Crash games, however with a structured twist. Rather of enjoying a rocket or a line ascend on a chart and attempting to cash out before it crashes, Limbo gamers merely choose a target multiplier and press "Bet."

The game's algorithm then produces a random number. If the generated number is equal to or higher than the gamer's picked target multiplier, the bet wins. If it fails, the bet loses.

The name "Limbo" plays on the timeless limbo dance concept: *How low can you go?* Or, in the case of multipliers, *How high can you intend?* Players can normally target multipliers ranging from a modest 1.01 x all the way up to a shocking 1,000,000 x, depending upon the particular gambling establishment's limitations.

### How the Game Works: Step-by-Step

Playing Limbo is incredibly straightforward. Due to the fact that the user interface is typically minimalist, players can find out the ropes within seconds. Here is the standard flow of a Limbo round:

1. **Set the Bet Amount:** The gamer chooses how much real money or cryptocurrency they want to bet on the upcoming round.
2. **Choose a Target Multiplier:** The player inputs their desired winning multiplier (e.g., 2.00 x, 10.50 x, or 500x).
3. **Inspect the Win Chance:** As the target multiplier modifications, the game instantly computes the mathematical possibility (Win Chance) of striking that multiplier.
4. **Roll/ Spin:** The gamer clicks the bet button.
5. **The Result:** The system reveals the created multiplier. If it satisfies or exceeds the target, the payment is determined quickly (Bet Amount £ \ times £ Target Multiplier).

### Example Scenario

Envision a gamer places a £ 10 bet and sets their target multiplier to **5.00 x**.

- If the game generates an outcome of **5.00 x or higher**, the player wins £ 50 (£ 10 bet x 5.00).
