Rather, an RNG (Random Number Generator) determines the result as quickly as the button is clicked. The animation of the ball bouncing is a visual representation of an outcome that the server has already computed.

This is why "Provably Fair" is so crucial. It enables a player to copy a "hash" or "seed" from the game and input it into a third-party verifier. If the outcomes match, the gamer has 100% verification that the online gambling

establishment did not tamper with the result.
