What is the Limbo Crypto Game?

Limbo is a crash-style casino game, though it varies a little from traditional crash games where a multiplier line increases continuously up until it crashes. Instead, Limbo is a target-multiplier game.

When a player opens a Limbo game, they configure two primary criteria:

1. **The Bet Amount:** How much cryptocurrency they desire to bet on the round.
2. **The Target Multiplier:** The payment multiplier they want to attain (e.g., 2x, 10x, 100x, or perhaps approximately 1,000,000 x).

When these are set, the player initiates the round. The game creates a random number. If the produced number is **greater than or equal to** the target multiplier, the player wins their bet multiplied by that target. If the generated number fails, the bet is lost.

How Limbo Works: The Mechanics Behind the Bets

Before a bet is placed, the casino produces a hashed version of the winning result. After the round concludes, gamers can confirm the mathematics to make sure the casino did not control the outcome.
