Plastic versus Poly: polywood furniture folding adirondack chair

Plastic versus Poly dont know the difference, well keep reading. Plastic outdoor patio furniture that so many of us are accustomed to seeing at the local home improvement store or even at the local super market is lightweight, goes swimming every time the wind blows and is easily broken. You will find plastic outdoor furniture only available in white or green that I have seen. Did I mention that quite often it needs to be replaced every year due to the chalky film that develops after a couple of ***Discover more*** months in the hot sun?Poly outdoor furniture, on the other hand, is a High Density Polyethylene (HDPE) plastic which is made from recycled milk jugs, bottles and containers. The HDPE plastic is then formed into typical wood profiles that will later be cut, drilled and screwed into sustainable outdoor furniture, decking, and a variety of commercial uses that are built to last a lifetime. Poly outdoor furniture is weighty and will withstand the north wind blowing as the lightest adirondack chair is weighing in at about forty pounds.There are now several poly lumber furniture manufacturers taking the outdoor patio furniture market by storm. The company on the leading edge is Poly-Wood outdoor furniture which is a name brand for recycled poly lumber furniture. PolyWood outdoor furniture may cost you more initially however is a far wiser investment when you consider the longevity of the outdoor furniture and the virtually maintenance free qualities. Poly-Wood outdoor furniture is backed by a manufacturers warranty which promises that it will not rust, split or splinter. PolyWood outdoor furniture uses commercial grade stainless steel with an additional Xylan protective and cosmetic coating. All these features intentionally planned to create sustainable outdoor furniture built to last a lifetime.Poly-Wood outdoor furniture is available in a wide variety of styles to complement any outdoor environment. You will find the classic Adirondack chair in several styles and a minimum of six traditional colors and six bright, vivid colors. Also, you can find Traditional Benches, Rockers, Gliders, Dining and Bistro Tables, Dining Chairs and Bistro Chairs and Swings all made out of sustainable PolyWood outdoor furniture.In the end you need to decide whether you are interested in sustainable PolyWood outdoor furniture for a lifetime of enjoyment that will withstand high winds and blazing sun. Or you can go with lightweight plastic furniture that will blow in the breeze, chalk and crack after a few years of use and then be tossed aside to further fill our overflowing landfills.
