An RNG continually produces sequences of numbers at millisecond intervals. The exact split second a gamer presses the "Spin" or "Deal" button dictates the outcome. This ensures that every video game round is totally independent of the previous one.

Go Back To Player (RTP)

RTP is a theoretical percentage that suggests just how much of the overall cash wagered on a particular game is paid back to players over the long term.

- For example, if a slot maker has an **RTP of 96%**, it in theory returns £ 96 for every £ 100 wagered over millions of spins.
- The staying 4% represents the **House Edge**, which is the statistical benefit held by the casino.

It is crucial to bear in mind that RTP is computed over millions of plays, meaning short-term outcomes can vary hugely.

Tips for Responsible Gaming
