- **If a gamer loses**, they tend to shift to the indication that would have beaten what their opponent simply threw.

Example: If Player A wins using **Rock**, expect them to toss **Rock** once again in the next round. To counter this, Player B should throw **Paper**.

2. The First-Round Bias

In a fresh match or a single-elimination wager, statistics reveal that **Rock** is statistically the most typical opening toss. This is largely due to the fact that the word "Rock" belongs to the game's title, making it emotionally prominent. Throwing **Paper** on the really preliminary is typically a statistically sound opening gambit.

3. Verbal Priming

In live or chat-enabled digital environments, opponents often attempt to affect each other's subconscious. Nevertheless, advanced gamers understand this is frequently a double-bluff, leading them to toss Scissors rather.
