What is CSGO Roulette?

CSGO roulette is a casino-style game adapted particularly for the Counter-Strike skin economy. Rather of wagering traditional fiat currency (like GBP or EUR), gamers deposit their in-game weapon skins, knives, or gloves onto a third-party betting website. These products are converted into site-specific coins, credits, or balance, which are then used to place bets on a digital roulette wheel.

While the visual of the video game mimics a traditional gambling establishment roulette wheel, the mechanics are normally structured for speed and digital integration.

The Standard Roulette Wheel Layout

A lot of CSGO roulette websites utilize a simplified wheel instead of the traditional 38-pocket American roulette setup. The standard design features three main wagering outcomes:

Outcome/ Color	Number Range/ Slots	Standard Payout	Likelihood (Approximate)
Red	Usually numbers 1-- 7	2x (Double)	~ 46.6% (depending on green slots)
Black	Typically numbers 8-- 14	2x (Double)	~ 46.6% (depending on green slots)
Green/ Zero	Typically number 0	14x	~ 6.6% (depending upon green slots)

(Note: Some sites feature an uncommon "gold" or "bonus" multiplier slot that pays out 50x or 100x, reducing the odds for Red and Black a little further.)
