Age places-- occasionally called solar flare, liver spots, or lentigines-- are level, darkened spots that create on sun-exposed skin. These areas commonly range from tan to dark brownish and can differ in dimension from little [Cherry angioma removal](#) freckles to larger patches over half an inch across. They most generally show up on the backs of hands, lower arms, face, shoulders, and top back. While they're called "age places," they're actually a lot more pertaining to sun direct exposure than aging itself, though they do become more prevalent after age 40. While age areas posture no medical threat, several people pick to have them treated for aesthetic factors. Throughout your appointment, we'll evaluate your skin kind, the level of pigmentation, and your goals to advise the most suitable treatment plan.

When To Connect To A Medical Care Expert

Age areas, which are small, flat, brownish or tan locations that frequently show up on the face, hands, shoulders, or arms, are typically harmless. But if you've discovered new places or adjustments in your skin, it's always a good concept to be careful. Your skin doctor, Dr. Vernon Mackey at Advanced Desert Dermatology in Peoria, AZ, can clarify when age spots and various other skin concerns need evaluation. They are a common skin condition, especially amongst those over 50.

While age places can be treated with different approaches, the most effective protection is typically preventing the growth of new brownish places. Skin doctors encourage their patients to cover, put on broad-spectrum sunscreen (SPF of 30 or higher), and avoid peak hours of the sun (in between 10am-- 2pm). Intense Pulsed Light Therapy (IPL) IPL is a treatment that is similar to a laser. It makes use of high intensity pulses of noticeable light to treat skin conditions such as age spots.

Lots of people do not establish age areas up until age 50 or older due to collective time invested in the sun over many years. This skin staining can show up in any kind of area of the skin subjected to the sun, a lot of normally on the hands, arms, shoulders, face and scalp. Spots can vary in measurement from blemish dimension to a half inch and might be expanded or show up organized with each other on the skin. For the most part, sunspots are not damaging and need no treatment, though they may cause cosmetic concerns for some. For more well-known coloring, in-office procedures typically give extra significant improvement.
